Frequently Asked Questions

→ KEY BENEFITS

- Renders URLs of (dynamic) (x)html pages including CSS to PDF on the fly
- html2pdf is a Service NOT a class library or EXE
- Very easy to use
- Many optional **parameters** are available

→ MORE BENEFITS

- No hidden costs
- No setup fee
- No need of installing anything on your server
- Support for dynamic (php, asp(x), jsp, cfm etc.) and static pages in (x)html
- Free E-Mail support

→ HOW IT WORKS

html2pdf renders a PDF on the fly based on the URL of a (x)html-page you respectively your website or application sends us.

→ DEMO

Type an URL of a Webpage of your Choice to generate a PDF file

→ WHY USE HTML2PDF?

html2pdf is simple. There is no need of installing or programming anything. A simple link is enough.

Here are some quotations we received or found in developer forums:

1. "I would like to have a button on my ASP (or PHP, JSP, ASPX, CFM etc. or HTML) pages to print/display that page as PDF."
2. "I'm trying to display my asp pages, something like report.asp?id=12345 to the browser as PDF file so that the users can print or download it."
3. "I can't install a PDF Server at my Host" "Installing a PDF Server is too expensive and too complicated for us"
4. "I don't have time and money to program a complex application that writes my contents to PDF"
5. "I got nice (X)HTML Pages that may be easily printed and would like to use them as a template to create PDF files on the fly."

html2pdf uses a PDF library of <http://www.websupergoo.com>.
